

Round table discussion "Standardization of postgraduate training of medical personnel in narrow specialties", Bishkek, 28 November 2018

REPORT

based on the results of monitoring
the implementation of residency
programs of regional clinical
databases

N. N. Brimkulov, Head of the Department of Family Medicine of
Postgraduate Training of the KSMA I. K. Akhunbayev

According with Order of the Ministry of Health KR No. 938 dated 06.11.2018 and order of the KSMA No. 327 dated 12.11.2018 by a group of specialists MOH KP from November 12 to 23, 2018r. the implementation of residency programs in 28 regional clinical bases was monitored

13 November — Naryn Regional Public Organization,

- Naryn FMC,
- Am-Bashinskaya TB,
- Am Bashinsky FMC.

14 November — Zheti-Oguz TSOVP.

15 November 15 — Issyk-Kul

Regional Public Organization OOB

- Issyk-Kul FMC,
- Ak-Suiskaya TB,
- Ak-Sui FMC.

16 November 16 — Balykchinskaya city hospital,

- Balykchinsky FMC.

20 November — Osh MDKB,

- Osh MOCB,
- Osh City Clinical Hospital,
- Osh city FMC.

21 November — Jalal-Abad regional FMC,

- Jalal-Abad Regional Hospital,
- Suzak TB,
- Suzak FMC,
- Uzgen TB,
- Uzgen FMC.22

November 22 — Nookat TB,

- FMC Medigos.
- FMC «Barchyn».
- City Hospital of Kyzyl-Kiya
- FMC of the

city Kyzyl-Kiya 23 November 23

— Kara- Suiskaya TB

- Kara-Sui FMC

At each clinical base, a meeting was held with the head or deputy head Medical institutions together with mentors and clinical residents, in the south of KR - with the participation of representatives of the medical faculty of Osh State University and the Southernbranch of KSMIPPK.

Main questions:

1. Discussion of the implementation of the latest orders and instructions of the Ministry of Health KR for residency.
2. Coordination issues Health facilities and educational institutions.
3. Short training of Training program, Resident's diary and new methods of ratings (questionnaires Mini-COF and NNPN).
4. Questions and answers.

A folder with a collection of all the mainregulatory documents on residency was handed over the heads of health care institutions.

All residents in narrow specialties in 2018 and mentors receivedDiaries of the first year of study (which briefly cover the curriculum, lists of skills and competencies, major syndromes, emergencies, distance learning lecture schedules).

At all meetings, both the heads of medical institutions and residents noted such monitoring and training of mentors is very important, they are held for the first time and it is necessary to conduct them regularly.

Meeting with interns and mentors in Osh region interregional united hospital

One of the most experienced healthcare managers, Director Nookat TB Asamidine Maripov knows all his residents well.

Director Nookat TB A.Maripov with residents and mentors

Director Issyk-Kul RH region T. I. Maanaev with residents

1. Basically, all residents sent to the regions have arrived at their clinical bases and are undergoing practical training.
2. In most cases, health care managers have accepted interns, issued orders that assign responsible persons and mentors, and participate in the supervision of practical training themselves. Among the best institutions for the implementation of training can be noted At-Bashinsky TB, Zheti-Oguz TSOVP, Issyk-Kul Regional Hospital, Nookat TB, Kara-Sui TB.

At the level of TB and district FMC, where there were vacant positions, most residents are enrolled in the staff at a 0.25- 1.0 rate.

Director of Kara-Sui TB G. K. Muratova and residents discuss academic plans

In the resource center Issyk-Kul Region ОБ

Most even territorial hospitals have a large flow of patients, sufficient equipment and modern medical equipment. So, Kara- Su TB has a CT scanner on its territory, endoscopic operations are performed, and the maternity hospital accepts up to 8,000 births a year. There are plans to purchase a CT scanner in Nookat TB.

Residents are involved in night shifts in the hospital, reception unit and NSR, participate in clinical conferences.

Participation in remote lectures is organized, which are carried out by KSMA on Thursdays, and KSMIPPK and NCOMiD on Fridays weekly.

Resident of Osh State University 2 years in the specialty

"obstetrician--gynecologist" Begaim

Kambaralieva said, that they have a very large practice: every day there are up to 1,525 births (about 8,000 births are registered in the hospital per year8000), so 2 doctors can't do without the help of 2 residents. Begaim, under the supervision of mentors, has delivered more than a hundred births, and more than ten -by caesarean section, independently performs all the main obstetric and gynecological manipulations, etc.д.

KSTB Director КСТБ, self -operating obstetrician-gynecologist Gulkayyr Muratova confirmed this, adding, that Begaim is almost completely ready to conduct an independent appointment, and, therefore, she is already enrolled in the 1st rate врача of the maternity hospital doctor.

Residents AT the Am-BashY TB hostel

In most regions, clinical residents do not have problems with housing, as usually return to their parents ' homes. In some districts, there is a positive experience of providing a hostel on the territory of the hospital (AT-Bashy TB, Zheti-Oguz TSOVP) or supporting the payment of utilities (Naryn Regional Public Organization).

Developed in Ak-Sui district Plan for attracting young doctors to the health care of the district, approved by the akim of the district U.Dokonbaev. The plan provides for the allocation of land for the construction of a house, for a vegetable garden, payment for utilities, and the allocation of coal. Investors are being sought for construction dormitories for health workers.

IDENTIFIED SHORTCOMINGS:

1. Not all managers are familiar with training programs and other documentation, which can be explained by insufficient communication and coordination between medical institutions and educational organizations.
2. Coordination issues between territorial hospitals and FMC on the completion of individual blocks of the program by residents of various specialties are also not always worked out. In the south, less attention is paid to training residents in family medicine, which may be due to the fact that the Osh State University Medical Faculty is not allocated budget places in family medicine.
 - e. No support for paying housing costs in Balykchy.
4. In Suzak TB, ГКБ Osh City Clinical Hospital, YOFMC are not equipped with distance lectures.
5. In isolated cases, there was insufficient control over the academic discipline. In isolated cases, missing residents were identified: in these cases, it was suggested to urgently clarify the situation (illness, departure, etc.) and take measures up to expulsion from school.

It is unlikely that today 's resident will want to
study
and work in a place like this...

Unfortunately, in the highest mountain region,
At- Bashinsky Center for Family Medicine has such
equipment in every office ... Due to the lack of water supply,
the toilet is located on the street...And on the street - minus
20...

Does the district akim visit here?. And the leadership
of the Ministry of Health?...

EGCOMENRATSNN:

1. Continue monitoring in Batken, Talas and Chui regions and continue monitoring on a regular basis 1-2 times a year, with the organization of training sessions for mentors of training programs, resident's Diaries, assessment forms.
2. Prepare and publish a sufficient number of copies A training manual for mentors that includes the main regulatory documents (PPKR, orders of the Ministry of Health of KR, instructions), as well as training programs of the main specialties, assessment forms, and information on distance learning.
 - e. Prepare instructions about Find a young doctor in the regions and provide it to all interested parties.
4. Create one database of clinical residents that reflects the workload on clinical bases, the number of students enrolled by specialty, by region, and so on.
5. Consider the issue of the cost of training in a contract residency in narrow specialties, equalizing the differences between institutions and reducing or canceling the payment for the first year of study.
 - . Once a year, consider the issue of training clinical residents at a meeting in the Ministry of Health of KR.
7. To conduct a special study of the effectiveness of training in the regions of comparison with training in Bishkek (with the support of the project "Initiatives in Medical Education").

Conclusion

Practical training in the regions is being successfully implemented, but requires increased attention from the heads of medical organizations and educational institutions.

In general, the effectiveness of practical training in the regions seems to be higher than in the city Bishkek and Osh.

It is advisable to further promote the decentralization of training in clinical residency.
